

**InfoPrint 5000  
General  
Production  
Platform (GP)**

**Avoid technology lock-in**

The InfoPrint® 5000 General Production Platform (GP) is a key member of the InfoPrint 5000 continuous form, inkjet printer family, which offers color, monochrome and MICR capabilities at a range of speeds. The InfoPrint 5000 provides transactional printers, commercial printers, book printers and direct mailers with investment protection through platform interoperability, operating flexibility and ongoing product enhancements that are available to all InfoPrint 5000 customers. You can configure platforms and models with each other to run diverse applications and optimize productivity.

The InfoPrint 5000 platforms are built with the same core technology but address different application and volume requirements. All are designed to conserve energy, produce superb quality, maximize productivity, offer an array of ink/fluid choices and work with multiple data streams.

The GP models are fully compliant with Interchange Set/3 (IS/3) standards. This means that in multivendor environments, IS/3-compliant applications generated by Advanced Function Presentation™ (AFP™) datastreams are printed correctly. IS/3 standards cover process and spot colors, International Color Consortium-based color management, industry-standard image formats and more.

**HIGHLIGHTS**

- Meet varying general production requirements with exceptional flexibility
- Choose from multiple field-upgradeable configuration options, including U configurations that optimize floor space and operator convenience
- Tailor your solution with three options for MICR printing
- Raise the quality of images and grayscales with enhanced halftones on certain monochrome models
- Expand color options with PANTONE PLUS certification
- Utilize an ink management suite for job cost estimates, ink optimization, and monitoring actual ink usage
- Achieve high throughput using diverse papers

# InfoPrint 5000 General Production Platform (GP)

## Expand color offerings with confidence

The InfoPrint 5000 GP is designed as a midrange volume solution for environments with varying requirements that may include tight print windows, diverse media and stringent color quality.

The GP models support a range of speeds, and all are field upgradeable. Track operational aspects of the InfoPrint 5000 through powerful tools such as InfoPrint Productivity Tracker and InfoPrint Ink Suite, a set of ink management tools. Expand color possibilities with PANTONE® PLUS certification, and an ever-increasing range of supported media types.

The built-in AFP architecture, which is designed for high-speed printing, can provide accurate, consistent, device-independent output with page-level error recovery for monochrome and color output.

## Customize your solution with MICR

Opt for integrated or on-demand MICR with color or monochrome, available from innovative model pairings of specific GP and InfoPrint 5000 Multi-Purpose Platform (MP) models. One configuration provides on-demand MICR with color in Adobe® PDF/ PostScript® environments, using a new feature for specified color support. Another configuration provides monochrome with On-Demand MICR in AFP environments, using the Intelligent Printer Data Stream™ (IPDS™), in a compact footprint that delivers very high throughput.

Another configuration combines two GP color engines and a third engine, such as the InfoPrint 5000 MP MICR. This space-optimizing U configuration features face-to-face displays to maximize operator convenience.

## Broaden media handling capability

GP models support high throughput with excellent media handling capabilities. Many stocks can be run at 96 meters per minute, instead of a lower speed, as a result of adjustments in ink drying time.

Some specialty papers that are heavy, light, treated or coated may need extra drying time. For these jobs, consider adding the optional Extended Media Dryer feature. With this field upgrade, you can attract new clients who are looking for high-quality digital book production, customer communications, Precision Marketing, direct mail and other applications. The Extended Media Dryer feature works with printers using pigment or dye inks, so customers using either ink can diversify offerings and meet a wide range of requirements.

The Extended Media Dryer feature minimizes energy consumption in two ways. InfoPrint 5000 inks contain less water than many other inks so less energy is required to remove moisture. In addition, the dryer runs in on-demand mode for special applications and media types, unlike dryers that run full time for all papers.

## Produce outstanding halftones

Images and grayscales in complex jobs, like books, can pose a quality challenge, especially when light tints are involved. Enhanced halftones on the GP KM3 monochrome model improve halftone quality while the printer is running at top speed.
